

KEY HIGHLIGHTS

- ABS-6 is a Lockheed Martin A2100 AX commercial communications satellite located at 159°E
- Features a payload of 28 C-band and 16 Ku-band transponders
- Wide and expansive footprint beams that cover the Pacific Ocean and the Northeast Asia regions
- Extensive C-band beams bring affordable internet and reliable services to remote Pacific Islands of unserved and underserved regions, and outlying islands
- Wide C and Ku-band coverage beams are suitable for VSAT services, TV distribution, IP trunking, cellular backhaul and maritime mobility services across the Pacific Ocean region
