

INTEGRASYS to Drive Satellite Innovation at SATExpo 2025

We are excited to be back for another year at [SATExpo 2025](#) in Dubai from **May 13-15** at **Booth 202**, co-located with [CABSAT](#) at the Dubai World Trade Centre. INTEGRASYS, an award-winning company, will highlight its innovations in sustainable satellite operations, Spade Domain Awareness (SDA), and multi-orbit network management. Also, it will be the perfect opportunity to further discuss its product sponsorship of [Helios](#), a Hollywood sci-fi thriller that tells the story of a spaceship and its crew during their urgent mission to the International Space Station.

SCHEDULE A MEETING

Featured Solutions for Next-Gen Satellite Operations

At INTEGRASYS, we design advanced solutions that redefine satellite operations, combining automation, AI-driven analytics, and multi-orbit interoperability to maximize efficiency and sustainability. Our portfolio empowers operators to navigate the complexities of modern satellite networks while reducing environmental impact.

Come and visit us at **Booth 202** to discover more about our highlights during the show:

- [Orbisat](#): A comprehensive SDA platform that tracks and protects orbital assets across all orbits, ensuring compliance with sustainability goals and minimizing collision risks in congested space environments.
- [Beam Budget](#): The industry's fastest link budget calculator, delivering precise, automated calculations for hybrid GEO/LEO networks. It simplifies network design, optimizes resource allocation, and accelerates deployment for service providers.
- [EO Master](#): A mission-critical geospatial intelligence tool that integrates AI and machine learning to analyze satellite data in real-time, enabling operators to monitor environmental changes, optimize coverage, and enhance decision-making for defense and commercial applications.
- [FlexCap](#): A flexible Enterprise Management and Control system ideal for VHTS, HTS, GEO, MEO, and LEO Satellite Operators, Service Providers, and Government Agencies.
- [LEO NMS](#): This multi-orbit, multi-vendor network management system allows the management, monitoring, and reporting of any provider network on a single screen.

Our nominated solutions for the [BroadcastPro Middle East Manufacturer Awards](#) are tailored for satellite operators, service providers, and government agencies, offering scalability, regulatory compliance, and seamless integration into existing infrastructure. By prioritizing automation and data-driven insights, we enable our clients to achieve resilient, future-proof networks that meet the demands of an evolving space.

Join Our Expert in a Panel Discussion

Sergio Encabo, our Benelux Head of Office, will join the **ME Workshop** on **May 12** to discuss “How Do We Monitor in the New Environment?”—a session supported by the [Satcoms Innovation Group \(SIG\)](#).

Don’t miss this insightful panel—join him and other industry experts to discuss the future of satellite monitoring in today’s evolving environment.

Meet the Team in Dubai

SATExpo 2025 is the premier event for satellite and space technology innovation in the MEASA region, focusing on connectivity, sustainability, and emerging markets. INTEGRASYS’s solutions align with the event’s goals of driving cross-sector collaboration in defense, telecom, transport, and environmental monitoring.

Don’t miss this chance to discuss with our team members:

- [Álvaro Sánchez](#), CEO
- [Sergio Encabo](#), Benelux Head of Office
- [Lucas García](#), Project & Support Manager

Visit our team of experts at **Booth 202** during **SATExpo** and join the conversation!
